

Skill: tumor-presence

status: wired · phase: A · version: 1.1.0

Is the target expressed in the indication's tumor tissue, and how does its expression distribute across cancer cell lines vs. paired tumor/adjacent samples?

A skill is a thin projection over evidence cards: it resolves each card's categorical through the shared rules engine, then collapses the fired rules into one rank-ordered verdict. The detail lives in the card design docs linked below.

Composition

field	value
data_mode	derived_read
synthesis	rule_engine
output_shape	data_package
steps_covered	1, 2, 3, 4, 6
optional_lenses	modality
rules axis	intracellular_intrinsic

Cards composed

Card	Question	Data source
expression-distribution	expression distribution across ~1500 DepMap cell lines	DepMap 26Q1 (ce
expression-tumor-vs-adjacent	upregulated in tumor vs matched adjacent normal?	TCGA tumor-vs-ad
protein-presence-cptac	present at the protein level vs matched normals per CPTAC?	CPTAC (protein, m

Verdict ladder

`_verdict()` resolves the fired rules in this fixed priority order (first match wins); this is deterministic, no LLM:

- 1. `broadly_high_expression` ← `expression-broadly-high-supportive`
- 2. `strongly_upregulated_in_tumor` ← `expression-strong-upregulation-supportive`
- 3. `lineage_restricted` ← `expression-lineage-restricted-supportive`
- 4. `modestly_upregulated_in_tumor` ← `expression-modest-upregulation-neutral`
- 5. `broadly_moderate_expression` ← `expression-broadly-moderate-neutral`
- 6. `broadly_low_expression` ← `expression-broadly-low-degrader-killer`
- 7. `not_informative` ← `expression-call-not-informative-degrader-killer`
- 8. `data_unavailable` ← `expression-(call-)data-unavailable-insufficient`
- 9. `insufficient` ← (no rule fired)

What it does NOT do

- Does NOT compare tumor to GTEx population-normal — that's `tumor-selectivity` (phase B).
- Does NOT synthesize narrative — the composed `target-profile` skill does that.
- Does NOT own dispatcher or rule content — it references card IDs + rule IDs from `target-contracts`.
